Forms

Design

Our new, optional Efalia ECM FormDesigner provides a graphical user interface for designing custom forms for usage within your company or providing your customers.
You are only a few clicks away from e.g. digital Support Engineer Report forms, time sheets, procurement or holiday applications.
A lot of standard elements – e.g. textboxes, drop-down box, checkbox and lines can be found in an icon bar and simply selected and placed on the form. Each element can be customised, e.g. setting a background colour, changing the font type or adding an image is done within a few clicks. Of course, adding a signature element is possible as well.

Provide

Forms created in Efalia ECM FormDesigner can either be used within your Efalia ECM or sent to your customers. The option "anonymous", combined with the ability of creating download-links, offers you the chance of providing forms to your customers, without granting them access to your Efalia ECM. The created forms can be either provided in PDF or HTML format for download.
The filled forms are automatically sent back to your Efalia ECM system by simply clicking a submit button. Of course, an option allows to prevent a multiple submission of the same form.

Manage

The form and the information stored on a form is automatically stored in Efalia ECM as soon as a form is submitted. This is achieved by a connection of form elements and Efalia ECM index fields.
This content can be used for further business processes managed by Efalia ECM, e.g. by Efalia ECM BusinessProcessManagement.
