# Hybrid Solution

## On premise Efalia ECM

Keep your existing Efalia ECM system installation on your server and save the resources for the planning and implementation of a full migration or use existing hardware and IT knowledge for your brand new Efalia ECM system.
Keep the administrative control in-house and adapt your server 100% to your company's security policy.

## Microsoft Azure Storage

But you can still benefit from the advantages of modern cloud technology with an easily upgradeable and cost-effective storage that comes with unique backup solutions and options due to the possibility of replication of the cloud storage – either locally redundant, zone redundant or geo redundant.
Reduce the backup effort noticeably and gain more security for your company data at the same time.

## A perfect Synergy

The scheduler based Efalia ECM hybrid storage option for on premise systems offers Efalia ECM on premise solutions a unique combination of the accustomed way of managing an in-house system with the convenience and security of a Microsoft Azure Cloud storage.
Based on the Efalia ECM Container option, the system uses a local storage location for intermediate storage and then transfers the data, scheduler controlled, to a storage location in a Microsoft Azure data centre.
Keep the full administrative control over your on premise Efalia ECM system and take advantage of the unique backup solutions of a cloud storage, which also includes the possibility of replication of the cloud storage – either locally redundant, zone redundant or geo redundant.
