FileDirector Release Notes Version 3.2

WinClient (WinC)	Build: 0	Revision: 24
Enterprise Manager (EM)	Build: 0	Revision: 7
Web Service (Server)	Build: 0	Revision: 7
WebServer	Build: 0	Revision: 6
Component Service (CS)	Build: 0	Revision: 0
EDoc Engine	Build: 0	Revision: 1
OCR Engine	Build: 0	Revision: 1
Retrieval	Build: 0	Revision: 1

WinClient (WinC) Changes

Version		Description
3.2.0.24	**Change**	• MOD 11.3 Checksum added in field content verification. • EPSON scanner DS510. DS-520, DS-560, DS-760, DS-5500, DS-6500, DS-7500, DS-50000, DS-60000 and DS-70000 support added. • PANASONIC scanner KV-S1057C, KV-S2087 and KV-S5076H support added. • Added a global counter functionality in stamps. • Multi-select keyword lists in search mode even if no multi-select is configured in EM. • Additional layout option added: The keyword list (tree view) can be left, above or below the index capture control. • The rotation state of a document will now be evaluated for a 'Save as…' or 'Send to…' action. • Added a new option to manually create 0-page documents easily.
	Fix	• Fixed an issue when checking in a document while the user confirms a 'Duplicate index action'. A server from version 3.2.0.7 and up is required for this to function properly. • In some cases a wrong thumbnail was displayed. • The field separator dropdown list on the 'Print' tab under configuration showed wrong entries. • Fixed an issue in the printer selection window where network printers were not displayed correctly. • The selected page size in the printer dialog window was not always recognized. • Hitlist marker was not correctly visible when using line colors and more than one hitlist entry was marked. • 'Bundle all pages' not possible on index fields of type date or numbers (Import window). • When using a group separator some index fields were not visible because of a missing scrollbar. • Under some conditions it could be possible that the wrong hitlist entry was marked during a document type change in edit mode. • Fixed a memory leak when saving/exporting a large amount of data. • Script results were not displayed correctly. • Fixed a problem when printing more than one document from the hitlist. • When printing multipage PDF documents only the first page was printed. • Problem solved when displaying a minimized index capture window. • Fixed an issue when converting PDF image files to PDF/A. • Issues fixed when using the 'Windows XP' theme. • The document type name was not correctly refreshed on the 'Revision' tab. • When using a tree structure, the focus jumped from the folder to the document type after printing a document. • Fixed some issue when using document type views. • The 'Clear index' fields button did not work as expected. • Problem solved when exporting the documents list in Excel format .XLS. • Problem solved when using the 'Runtime Column Customization' of the hitlist.

Enterprise Manager (EM) Changes

Version		Description
3.2.0.7	**Change**	• MOD 11.3 Checksum added in field content verification settings. • EPSON scanner DS510. DS-520, DS-560, DS-760, DS-5500, DS-6500, DS-7500, DS-50000, DS-60000 and DS-70000 support added. • PANASONIC scanner KV-S1057C, KV-S2087 and KV-S5076H support added. • Added 5 new extended options in the Process management Auto action 'Set field to value'. • Additional layout option added in the Client configuration: The keyword list (tree view) can be left, above or below the index capture control in WinC. • Behaviour of using the mouse wheel changed in Process management designer to avoid accidental change of options. • Process names in Process management can now have a length of 255 characters. • Line color row added to document type views to show if line colors are used or not.
	Fix	• Fixed a memory leak when displaying larger processes. • Changing the language selection was not always saved.

Web Service (Server) Changes

Version		Description
3.2.0.7	**Change**	• Support for Microsoft Azure SAAS SQL Server added. • MOD 11.3 Checksum added in field content verification. • Process names in Process management can now have a length of 255 characters. • Added the ability for clients to execute server based Plug-ins.
	Fix	• Fixed an issue when checking in a document while the user cancels a 'Duplicate index action'. A WinClient from version 3.2.0.24 and up is required for this to function properly. • Keyword list count didn't work as expected with linked keyword lists. • Fixed an issue in Config Utility when searching for domains even when access to some related sub domains is denied. • Error when stopping scheduler from a different server in a Web farm environment. • In some cases the ODBC import in Process management raised an error. • Deleting users or groups from the Client configuration profiles failed for sub admins. • Repeatedly exporting files with the same name into the same location using Process management caused the creation of invalid filenames. • Under some conditions the keyword usage count was incorrect. • Without the use of the Client configuration no upload scheduler configuration was passed to the WinClient. • Attachments in a Process management email were missing when the embedded tag was missing in the email body. • Document retrieval issue in multi-location scenarios fixed. • A multiple keyword search was not possible on a NON multiple keyword field. • Sub domain users could see other domain members if more than one domain (users/groups) was setup on a cabinet. • A Process management workflow could cause a web service crash. The document was then checked out by the fd-server account. • A mix of groups with a license limit and regular groups could cause an access denied. • Fixed an issue with the download link of the Component Service on the FileDirector installation web site.

WebServer Changes

Version		Description
3.2.0.6	**Change**	• MOD 11.3 Checksum added in field content verification. • Upload with multiple file selection for HTML5 browsers added.
	Fix	• Group separator was only shown as field. • Revision window will now be automatically closed in full screen document view. • In the modern theme the login buttons were misplaced in French and Japanese language. • Fixed an issue with the WebScan application when cancelling the scanner setup window. • Fixed an issue with the thumbnail creation of some PDF files.

Component Service (CS) / EDoc Engine Changes

Version		Description
3.2.0.1	**Fix**	• Fixed an issue when converting PDF image files to PDF/A.

OCR Engine Changes

Version		Description
3.2.0.1	**Fix**	• Fix for issues with zone coordinates on auto rotated pages. • Re-implemented ‘ProcessorAffinity’ configuration in ‘FileDirector OCR Engine.exe.config’.

Retrieval Changes

Version		Description
3.2.0.1	**Fix**	• Fixed an issue when opening the Options window. • Fixed an issue in the printer selection window where network printers where not displayed correctly.

Features and Changes 3.2.0.0

FileDirector 3.2.0.0 requires the Microsoft .NET Framework 4.5.
Microsoft Windows XP and Microsoft Windows Server 2003 are no longer supported.

A combination of FileDirector WinClient 3.0.0 / 3.1.0 and FileDirector Server 3.2.0 is still supported.

Type	Module	Description
Feature	Server, EM	Security on overlays.
Feature	Server, EM, WinC	Color support for Document Type views and Document Type fields depending on Index field values.
Feature	Server, EM, WinC	Group separators can be added for Document Type views.
Feature	Server, EM	New Mail Archiver scheduler as a new way to import Emails from a Microsoft Exchange mailserver.
Change	Server	Old unused FD_Images database rows will now be removed during a cabinet upgrade or when new revisions will be created on such documents during a check in. Depending on the amount of data it could take some time to remove the old unused FD_Images database rows. The advantage is that the cabinet database may shrink significantly.
Change	Server	Password expired is now logged as a security warning in Audit trail and not as an error.
Change	Server	Full access on a cabinet is now sufficient to undo check out other user's document.
Feature	Webserver	Move through Thumbnail view using Up and Down cursor keys. Open the document using Enter key.
Feature	Webserver	Move through documents in hitlist using Up and Down cursor keys. Open the document using Enter key.
Feature	Webserver	Full screen button to open image in new browser tab.
Change	Webserver	Performance enhancements due to reduced bandwidth use.
Feature	Webserver	New Modern theme as new default theme added. Old theme is still selectable.
Feature	Webserver	Document files can be deleted from the upload queue.
Feature	Webserver	Add/Remove document pages in edit mode.

Feature	Webserver	Document view index width is now saved.
Feature	WinC	Possibility to directly install a WinClient setup without uninstalling the previous version.
Change	WinC	Group warning messages are now on a separate tab under options.
Feature	EM	Toggle between detail view and icon view of cabinets.
Feature	EM	Conditions added to the index import scheduler.
Feature	EM	Incremental search filtering of a user account under accounts and groups.
Feature	iClient App	Support for FDDL links added.
Feature	iClient App	Possibility to send documents to a process.
Feature	iClient App	Fulltext search added.
Feature	iClient App	Signatures can be added to process management actions.
