FileDirector Release Notes Version 3.6

WinClient (WinC)	Build: 0	Revision: 6
EnterpriseManager (EM)	Build: 0	Revision: 0
Web Service (Server)	Build: 0	Revision: 1
WebServer	Build: 0	Revision: 1
ComponentService (CS)	Build: 0	Revision: 0
OfficeLink	Build: 0	Revision: 0
EDoc Engine	Build: 0	Revision: 0
OCR Engine	Build: 0	Revision: 0
ExplorerClient (EC)	Build: 0	Revision: 0
Retrieval	Build: 0	Revision: 0
AutoCapture Client (ACC)	Build: 0	Revision: 4

Features and Changes 3.6.0.0

FileDirector 3.6.0.0 requires the Microsoft .NET Framework 4.5.
Microsoft Windows XP and Microsoft Windows Server 2003 are no longer supported.

A combination of FileDirector WinClient 3.0.0 / 3.1.0 / 3.2.0 / 3.5.0 and FileDirector Server 3.6.0 is still supported.

Type	Module	Description
Feature	EM, WinC, ACC, Server	The new FileDirector AutoCapture module allows a quick and smart classification and capturing of incoming invoices. AutoCapture comes with a dedicated client, designed for processing and train new suppliers fast and easily. The AutoCapture client offers a mouse-based training and an automatic highlighting of the selected information. The AutoCapture routines also provide auto-rotation which ensures that documents are stored automatically with the correct text alignment. AutoCapture routines can be used in combination with FileDirector MailArchiver to process unencrypted PDF files, attached to an Email, automatically and store them in FileDirector. In addition, AutoCapture provides a self-learning routine. With every receipt trained, the knowledge base of FileDirector AutoCapture grows and is used to support you more and more when capturing new, unknown receipts. AutoCapture can use supplier contact data, stored internally in the FileDirector database or an external database, connected via ODBC.
Feature	OfficeLink	In addition to the already existing buttons in FileDirector OfficeLink, 2 new buttons were added. The first button shows an additional column in the Microsoft Outlook Email viewer, which shows whether an email is already stored in FileDirector or not. The second button opens the archived email in FileDirector WinClient.
Feature	EM, WinC, Server	The retention control has a new feature, which allows index field values being used as conditions. In addition, a new external phase action was added which allows the user of FileDirector WinClient to commit a phase manually.
Feature	EM, WinC, Server	Barcode stamps were added as a new feature. This barcode can be used either during scanning or within the index capture window of FileDirector WinClient. The barcode value can either be static or dynamic. The position of the barcode on the document page can be predefined or a smart search mode scans automatically for a free area on a document.
Feature	All	The processing of PDF files was improved. This will result in a better handling of different PDF formats.
Feature	Webserver	Checkboxes were added to the hitlist of FileDirector WebServer. This allows selecting multiple documents easilly.
Feature	EM, WinC	Canon scanner DR-C240 support added.
Feature	EM, Server	New parallel branch option in Business Process Management added. This new option allows the process to route a document through different process actions at the same time.

Feature	EM, WinC, Server	New duplicate index actions ‘If not empty’ added. These new actions allow executing the duplicate index action only if the index field content is NOT empty.
Feature	EM, WinC, Server	Conditional colours were added to document type fields which allow displaying conditional background colors for index fields in the control box of the FileDirector WinClient.
Change	Server	The processing of FileDirector Container files has been changed: After all document’s references in the FileDirector database are removed, the corresponding Container file will be deleted from the Windows file system.
